PREFACE.

THIS establishment being but eight miles from the city of New-York, with a steamboat and stages making several trips daily between the two places, offers every advantage that would be possessed by a city location; and an office and agency is also established in the city to expedite its business.

The Proprietors, in tendering to the public this new *Descriptive Catalogue* (33d edition) with *reduced prices*, desire to state that they have an immense stock of Fruit and Ornamental Trees, &c., of *large size*, and all of healthy and vigorous growth. They also have trees of all the smaller sizes suitable for young Nurseries and for distant transmission where transportation is expensive. The establishment contains at the present period *more than a million of Trees and Plants*, and the Proprietors are willing to enter into liberal arrangements as to prices with all such persons as desire large quantities of trees, &c., and to those proprietors of Nurseries who wish to extend their collections, and such other persons as may wish to establish new Nurseries, they will make liberal discounts from the usual rates. Any persons who are desirous to act as Agents in towns where no agency at present exists, will please communicate their views in regard thereto.

Those who were in correspondence with the Establishment, from 1820 to 1836, will have perceived by their written communications therewith during the last two years, that the active correspondent of that era has again taken the helm and returned to his first love—the Vegetable Kingdom—and they will also perceive that in resuming his position, he is animated with the same spirit and zeal in this pleasurable pursuit, which he formerly manifested. The decease of his estimable parent, the late Wm. Prince, rendered this course indispensable, at the same time that feelings of duty, inclination and interest tended to the same result. During the last years of the life of the late Proprietor, he, from advanced age, found it indispensable to confide very much to the superintendents he employed, but under the present Proprietors nothing is done except with their personal supervision, and all correspondents may rely on the utmost precision, exactitude, and liberality in the fulfilment of their commands.

In the arrangement of the present Catalogue we have made free use of the knowledge and information we possess as to the qualities of the respective fruits, and we have instituted such a discrimination as cannot fail to be of immense importance to all cultivators who are solicitous of making judicious selections.

The fruit trees in the Catalogue are either grafted or inoculated, and are propagated from such European and American kinds as have acquired a well merited celebrity, the whole collection of which has recently undergone a most careful revision, and the selections have been made with great care and attention. Every precaution is taken which is necessary to preserve the different varieties perfectly distinct, and all the Peach and other trees are perfectly healthy, and free from disease. Many persons are apt to purchase trees without regard to any point but their cheapness, and not unfrequently, after the toil and expense of years, find them, when they arrive at bearing, absolutely worthless. Others who regard the price only, pay no attention to the size and vigor of the trees, and consequently sacrifice many years uselessly before their orchards come into bearing. The strongest proofs the Proprietors can give the public of their anxiety to guard against misconception, are the precise descriptions contained in the Treatises recently published and in the present Descriptive Catalogue, by the means of which every person, however ignorant on the subject, can ascertain if he has been deceived.

In regard to the identity of the various kinds of fruit, the Proprietors do not pretend to a perfect infallibility, but they do constantly aim at that point, and therefore if an inadvertent error occasionally arise, it is because their unwearied scrutiny has not been able to guard against it. One great advantage possessed by the trees sent from this establishment, is their particular hardihood. From the proximity of the nurseries to the ocean on one side, and to the East River on the other, with a free and open exposure to all winds, accompanied by the particular advantage of being so far north as to acclimatize the trees to any still more northern section of our country, they acquire a degree of hardihood which renders them extremely eligible for colder latitudes, and to support the rigor of less favored regions, and trees thus hardened by nature are also found to succeed best in our Southern states. It is doubtless to these causes that is to be attributed the general success which has attended the trees sent from this establishment, even when transmitted to Nova Scotia,

the Canadas, &c. and the winter of 1831–2 incontestably proved their superior hardihood, they having withstood the severity of that season uninjured, while immense numbers of trees elsewhere in the middle and in the eastern states, were destroyed thereby.

The stock of some of the newest sorts of trees is limited, and those trees, in consequence of their recent introduction, are of less size. Many other varieties will be announced hereafter in a Supplementary Catalogue, additional time being necessary as well for their propagation, as for judicious investigations, but in the mean time scions of them for engrafting can be supplied. New fruits are not added to the collection, merely, because their names differ, but a selection is made of those only, which merit and have received the encomiums of persons acquainted with the subject.

Every tree when sent forth from the garden, is duly labelled; and from fifteen to forty trees are usually packed in each matted bundle, and where boxes are preferable, from 60 to 100 Trees and Shrubs can be packed in each.

Where trees are requested for exportation, they are carefully packed in matted bales, boxes, or casks, so as to be sent to Europe, the West Indies, or any part of America, with perfect safety, for which a reasonable charge is made.

All packages of trees are delivered at Fulton-market wharf, New-York, by water, free of freight; and, when desired by persons at a distance, they will be shipped to any port they may designate, and agreements have been made with the lines of packets, and railroad lines to take packages of trees at very moderate freights. If desired to be transmitted to Philadelphia, Boston, and other adjacent places by the railroads, they will reach their destination with rapidity, and the canals now forming in every section of the country, present cheap and easy modes of conveyance. No care is wanting on the part of the proprietors to give such directions as may cause them to arrive safely; but it is to be expressly understood, that after being thus delivered or shipped at New-York, and a receipt taken therefor, they are wholly at the risk of the person who ordered them. Insurance against loss by sea will be effected whenever requested.

To such persons as desire Fruit trees, &c., and are not themselves acquainted with the qualities of all the different kinds, it is recommended that they specify in their orders the number of trees wanted of each species of fruit, and leave the selection to the proprietors, who will make it according to the views and tastes of the applicants; and in such cases they may rely that those only will be sent which are of the most approved kinds; and, when desired, those that will ripen in succession, and larger trees can generally be selected in such cases. It is also well, where the orders are small, to unite those of several neighbors in one, which will both abridge the trouble and expense, and, as each tree is labelled, it can cause no confusion. Persons who may wish to make selections of fruits of American origin, will find them particularly designated. It sometimes occurs that the demands for particular kinds of fruit trees are so much greater than anticipated, that it renders those kinds for the moment comparatively scarce, except such as are of small size. In these cases, in order to prevent any delay, it would be well that the orders should authorize, that such kinds may be replaced by others of equal quality, which trust will be executed in a manner worthy of the confidence reposed.

American Indigenous Trees, Shrubs, and Plants, or their seeds, suitable for sending to Europe, will be supplied in assortments, from five to one thousand dollars or more, and they will be packed so as to insure their safety.

The proper season for transplanting trees, are the months of October, November, and December, in autumn; and March and April in the spring. For bulbous flower roots, the best season is from July to November inclusive. Dahlias, from October to May, both inclusive; Greenhouse plants can be forwarded with safety at any season, except the winter months, and even then if the conveyance is wholly by water. In addition to these, Scions of Fruit Trees, Grape Vines, &c., can be transmitted from October to April.

Trees, &c., destined for the South and West should be forwarded in the autumnal months, in consideration of their early spring vegetation.

Many persons are prevented from ordering trees, from a supposition that they will not bear distant transportation, an idea so extremely erroneous, that it ought to be exploded. The proprietors are in the constant habit of sending trees and even the most delicate plants, to the remotest part of the Union with success, and they annually transmit large quantities to the different cities of Europe. Persons sending orders, will please to state the extent of land and water carriage, and the articles will be packed accordingly. Precise directions should be given how the packages are to be marked, and by what route or conveyance they are to be forwarded, &c.

The packages will be forwarded by such route as shall be designated, or where the option is left to us, we will adopt such mode of transmission as shall be most expeditious, economical and safe. During the winter, when the northern rivers and canals are frozen, all packages destined for the Western States can be sent by the way of New-Orleans, or via Philadelphia or Baltimore, to Pittsburgh or Wheeling.

All Catalogues may be obtained gratis by application direct to us. All orders for Fruit and Ornamental Trees, Green-house Plants, Bulbous Flowers, Dahlias, or Seeds, must be sent, post paid, direct to us, or through a regularly authorized agent. Every invoice transmitted by us will have a printed heading and our signature, to prove it genuine, and we assume no responsibility whatever, where such an invoice cannot be produced.

As many persons in the Union act as agents for different nursery establishments, it is particularly requested, that where orders are intended for us, it be plainly specified, but no person is to be considered as our Agent, unless he can produce written proof of the fact. It is expected that persons with whom no acquaintance exists, will, in forwarding orders otherwise than through an agent, designate some person in New-York who will be responsible for the payment, or tender a suitable reference, and a discount will always be allowed when cash or a draft at ninety days or less, on some city, is sent with the order. It is requested that those who, in sending orders, mention only the numbers by which the trees, &c., are enumerated in the catalogue, should be particular to state the edition from which they make their selections, as there are some numerical variations in the different editions. All letters requiring information will be promptly replied to, and the proprietors desire that applications be made to them direct on every subject.

Any packages for us will come safely if directed to No. 23 Pine-street, New-York.

The postage of a letter is a trifling thing, but to one who receives a great number it becomes burdensome; persons are therefore desired to send their letters post paid.

N. B. It is expected that no persons having similar establishments will copy the different remarks attached to this Catalogue. This notice is more particularly applicable to two neighboring Nurseries, the proprietors of which have been so assiduous in filching our prefatory and other remarks, that they have even copied the typographical errors which had been made by the printer. To protect ourselves against a repetition, we have secured the copyright, and shall promptly prosecute for the offence.

PRICES OF FRUIT TREES, &c.

The prices have been greatly reduced, in many cases 25, 33, and even 50 per cent. below former rates, and the average prices throughout the Catalogue will be found as low, and in general much lower, than the same articles, *equally genuine and of equal quality*, can be obtained elsewhere.

Green House Plants, in assortments, will be supplied at lower rates than they can be obtained any where else in the United States.

Where ornamental trees of very large size are wanted for streets, avenues, &c., or where fruit trees are wanted of extra large size, they will be charged in proportion.

INDEX.

FRUIT TREES, SHRUBS, AND PLANTS.

PRINCE'S

DESCRIPTIVE CATALOGUE

OF THE

FRUIT TREES, ORNAMENTAL TREES,

SHRUBBERY AND PLANTS,

CULTIVATED AND FOR SALE AT THE

LINNÆAN BOTANIC GARDEN & NURSERIES,

FLUSHING, NEAR NEW-YORK.

☞ Orders must be addressed to WM. R. PRINCE & CO.

N. B. *Precaution.*—No other person in this vicinity is authorized to make use of the name of this establishment, or to receive orders therefor.

In order that the benefits resulting from the present advanced stage of Pomological knowledge may be generally diffused, the utmost pains have been taken to comprise in the present Catalogue, ample descriptions of the respective varieties of Fruits, and it will be perceived at a glance, that no similar publication has ever appeared, that can bear any comparison with the present one in this respect. These descriptions have been mostly derived from an inspection of the fruits in the extensive specimen grounds of this establishment, and the young trees in the Nurseries connected therewith are propagated from the same specimen trees from which the descriptions were made. The valuable Catalogue of the London Horticultural Society has furnished collateral aid, and to our estimable friend, the late Robert Manning, and to William Kenrick and others, we are also indebted for an exchange of information.

Wherever an asterisk (*) precedes the name of a Fruit, it indicates American origin, and wherever the letters R. M. are found, they indicate that the variety was received from the late R. Manning. The correct name of each variety of fruit is printed in Roman letters, and numbered; and the synonymes immediately follow, and are printed in italics.

APPLES.—*Pommiers.*—*Pyrus malus.*

25 CENTS EACH.

Explanation of abbreviations.

Prevailing color.—b. brown; d. dark; g. green; p. pale; r. red; rus. russet; s. scarlet; st. striped; y. yellow.

Form.—Pearm. Pearmain shaped, or a truncated cone; Calv. Calville shaped, having prominent ribs; the other terms used are definitive.

Size.—1. very large; 2. medium; 3. small.

Use.—T. table; K. kitchen; C. cider; P. preserves; orn. ornamental.

Quality.—1. first rate; 2. second rate; J. juicy; M. mealy; V. P. very productive.

Name.	Color.	Form.	Size.	Use.	Quality.	Season when at maturity.	Remarks.
1 Alexander *Emperor Alexander*	st.	oblate	1	T K	1	Sep. Dec.	V. P. J. A splendid Russian variety.

MISCELLANEOUS PEARS,

Whose characters are not well ascertained, and some of which may doubtless prove synonymous with well known varieties. The foreign varieties were imported direct from Europe by ourselves, except those marked R. M., which we received from R. Manning.—Trees can be supplied of all these varieties.

REJECTED PEARS.

These varieties have been rejected from cultivation in consequence of the bad quality, defective character, or diminutive size of their fruit, or for the bad bearing of the trees. Their rejection as outcasts is based upon the investigations of the Horticultural Society of London, and of several French and German Pomologists, connected with the experiments of Robert Manning, William Kenrick, the late Wm. Prince, and of ourselves. It cannot fail to create surprise, that the greater portion of these varieties are still disseminated with recommendatory epithets by many who are ill-informed upon the subject. In arranging the lists of Pears, no exception has been made in favor of those varieties which produce good fruit when sheltered by a wall, or by other artificial culture, as the great class of purchasers of trees desire them exclusively for standards in orchards, and therefore those varieties requiring artificial means to perfect their fruit are to them absolutely valueless.

Ambrette, or Tilton.

Sloe.
Stoneless, or Pitless.
Sweet Damson.
Wetherell's sweet.
Wheat, or Whitton.
Winesour.

CHERRIES.—*Cerisiers.*

50 CENTS EACH.

The trees of the Heart and Bigareau classes (Prunus Cerasus) grow lofty and pyramidal, and produce sweet fruit. The trees of the Duke and Morello classes (Prunus avium) are of lower growth, more compact form, and the branches more slender, the fruit sub-acid or acid; and they, being originally from a more northern latitude, are the most hardy.

Explanation of abbreviations.

Color.—b. blackish; d. dark; p. pale; r. red; w. white; y. yellow.

Form.—heart. heart-shaped; obt. h. obtuse heart; obl. h. oblong heart; oval h. oval heart-shaped.

Size.—1, very large; 2, medium; 3, small.

Quality.—1, first rate; 2, second rate.

Texture.—ten. tender; h. ten. between firm and tender.

Season of maturity.—b. beginning; m. middle; e. end of the month designated.

Remarks.—V. P. very productive; K. suitable for kitchen; and all not so designated are table varieties.

Lady Southampton's yellow.
Golden drop.
Red heart.
Wellington.
White heart.
Early White heart.
Amber heart.
Yellow Honey.
Honey, of Coxe.

PEACHES.—*Pêchers.—Amygdalus Persica.*

EACH 25 CENTS, and by the hundred at a liberal discount.

If any person desires to have peaches on plum-stocks, such will be supplied. Experience, however, has proved them valueless for standards, and only suited to a dwarf habit when trained on walls, &c. The sap of the plum is altogether insufficient to sustain the vigorous growth of the peach in open culture beneath our powerful sun, our climate greatly assimilating to that of Persia, the natural country of the peach. The consequence is, that trees budded on the plum begin to fail after the second year, overgrow the plum-stock, and either break off, or perish from exhaustion after a short lapse of time; and even while living they present but a dwarf, pigmy appearance, when contrasted with those which are inoculated on the natural stock as is practised in Persia. These remarks apply equally to the Nectarine, the Apricot, and the Almond, as with all these classes of fruit the practice referred to has long been exploded by *intelligent cultivators*, and we therefore refrain from offering them, deeming such trees a fraud upon the public.

Explanation of abbreviations.

Color.—b. brownish; c. crimson; d. dark; p. pale; pur. purple; g. greenish; o. orange; r. red; w. whitish; y. yellow.
Flesh.—c. clingstone, or adhering to the flesh; F. freestone or melting, the flesh separating from the stone.

*Ward's late free.
*Weld's free.
Welle's freestone, R. M.
*Weller's Carolinian, C.
White October.

REJECTED PEACHES.

These have been rejected from cultivation in consequence of their bad quality, diminutive size, or other defects, or for the bad bearing of the trees, and in some instances because there are superior varieties that ripen at the same period, it always being deemed unwise to cultivate an inferior variety when a superior one is at our disposal.

Almond peach.
Belle Chevreuse.
Early Chevreuse.
Burgess Beauty, *poor fruit.*
Cardinal.
Congress, c.
Cooper's early.

DWARF FRUIT TREES.

Dwarf trees suitable for Walls or Espaliers can be supplied of all the various classes of Fruits, and comprising a selection of excellent varieties. Price 37 to 50 cents.

CORRECTION IN FRUITS.

Gansel's or Broca's Bergamot pear was placed in the list of Rejected Pears in accordance with the condemnation in Kenrick's Orchardist, page 127, but on reference since to my own notes, I find Mr. K. has fallen into an error, as this variety is even when cultivated as an unprotected standard, very productive, the fruit fair, and extra delicious.

ALMONDS.—*Amandiers.*

THOSE MARKED † ARE 37½ CTS.—AND THE OTHERS 50 CTS.

1† Sweet hardshell, most hardy *Cocque dure*	Amygdalus communis

New Chili.
Large Lima.
Red Chili.
—— Hautbois.
Wilmot's Superb.

ESCULENT ROOTS, &c.

Asparagus, Common, per 100, 50 to 60 cents, and $4 per 1000.
Ditto, 2 and 3 years old, 5½ to 6 dollars per 1000.
Large Dutch, per 100, 75 cts. to $1—per 1000, $6.
Ditto, 2 and 3 years old, $7 per 1000.
Artichoke, Jerusalem, per dozen 37 cents, per 100, 2 dollars.
Ditto, do New European variety, much superior, 75 cents per dozen, and 4½ dollars per 100.
Green globe, per dozen 2½ dollars; per 100, 15 dollars.
Cardoon, per dozen 2½ dollars; per 100, 15 dollars.
Chamomile, double, each 25 cents; per dozen, 1½ dollars; per 100, 8 dollars.
Horse-radish, per dozen, 1 dollar; per 100, 4 dollars.
Dyer's Malder, each 25 cents; per dozen 2½ dollars; per 100, 10 dollars.
Licorice, each 37 cents; per dozen 4 dollars.
Sea Kale, per dozen, 2 dollars; per 100, 15 dollars.
Rhubarb for Tarts, or Pie Plant, each 12 to 18 cents, according to age; per dozen, 1½ to 2 dollars; per 100 10 to 18 dollars.
True Medicinal, or Rheum australe, each 50 cents; per dozen 4 dollars.
Wilmot's early red, each 25 cents; per dozen, 2½ dollars.
Giant, or Goliah, each 25 cents; per dozen, $2½; per 100, $16.
Early Tobolsk, each 37 cents; per dozen, 3 dollars.
Myatt's Victoria, 50 cents; per dozen, $4.

SCIONS, &c.

Scions of Grapes of a number of the finest kinds, can be supplied if applied for in season, at from 5 to 10 dollars per 100, or in less quantities; but in no case will scions of any variety be sent to a less amount than the price of a vine; and of the very rare varieties three scions will be considered equivalent in value to a vine. Scions of Isabella, Catawba, Alexander, and several other varieties of grapes, $15 to $20 per 1000.

Scions of all kinds of Fruit trees, suitable for grafting, will be supplied at 50 cents per dozen, each scion suitable for three grafts, where the price of a tree does not exceed that sum; but where it does, the same price will be charged for the dozen scions as for a tree of the same kind. If smaller parcels are wanted, they will be supplied at $3 for 12 varieties, and at same ratio for a larger assortment. When a large number of scions are wanted of the more plentiful sorts of Fruits, they will be supplied by the 100 or 1000 at reduced rates. It is better that such orders be sent in the fall or winter.

Scions of Currants, Gooseberries, Raspberries, Berberries, Mulberries, Quinces, Figs, Poplars, Willows, &c. will be supplied at prices in proportion to their respective value; but no charge is made of a less sum than the price of a tree or shrub of the same kind.

Scions of the fine species of Osiers, or Willows, most celebrated for basket-making can be supplied, suitable for planting hedge rows, at from 3 to 5 dollars per 100, or 25 dollars per 1000.

Hawthorn for hedges, of the celebrated Washington Thorn, at 75 cents per 100, or 4½ dollars per 100.
Do. do. extra large, 6 dollars per 1000.
Cockspur, or Newcastle Thorn, same prices as the preceding.
English hawthorn quicks, 75 cents per 100, and 4 dollars per 1000.
Do. do. extra large and strong, 6 dollars per 1000.
Buckhorn, or Rhamnus catharticus, for hedges, 2 dollars per 100, or $15 per 1000.
Do. large size, 6 dollars per 100.
Yellow Locust, small trees for hedges at from 4 to 6 dollars per 100.
Osage Orange, or Maclura, for hedges, 20 to 25 dollars per 100.
Chinese arbor vitæ, small, for hedges, 12 to 15 dollars per 100.
American ditto, $10 to $14 per 100.
Privet, or prim, for hedges, 5 dollars per 100, 30 dollars per 1000, and larger size, 40 dollars per 1000.
Scions of do. 2 dollars per 100, and 15 dollars per 1000.
Honey Locust, or Three thorned Acacia, (part thornless,) 5 dollars per 1000, and extra large $10.
Red Cedar, for hedges, 8 dollars per 100, or 50 dollars per 1000.

DIRECTIONS FOR CULTURE AND MANAGEMENT OF FRUIT TREES, &c.

We will commence by stating that all affectation of mystery by Horticulturalists is mere chicanery. The operations of nature are uniform in the vegetable kingdom as in all her other works, and it only requires the exercise of a moderate portion of common sense to comprehend her course.

Transplanting.—Spring is the season when we enjoy the most pleasure in rural pursuits, and it therefore has been adopted as the most general for transplantation. The fall however is much to be preferred, as it allows the ground to become settled during winter and the roots start afresh at the first opening of spring. In regard however to those Fruits obtained from warmer latitudes, it is necessary for us to consult climate, and we have therefore come to the following conclusion. In localities south of New-York, the fall is preferable for *all trees*—north of New-York, the fall is preferable only for the Apple, Pear, Plum, Cherry, and other trees of northern latitudes, and the spring is to be preferred for the Peach, Apricot, Nectarine, and Almond.

In planting, make the holes large, say 2½ feet square and the same depth; place the surface mould aside by itself, and cast away the poisonous bottom mould as useless; mix with the surface mould a portion of other rich mould and about four shovels full of well rotted manure to each tree; then spread a few inches of this compost at the bottom—place the tree—fill in till the roots are covered and tread it well; then fill up the rest without treading, as it must be left loose to receive the rains; after thus planted, water each tree well and occasionally afterwards if the weather proves dry.

In regard to distance Apples should be planted in orchards at a distance of 30 feet, Pears and Cherries, 20 to 25 feet, Peaches, Nectarines, Apricots, Almonds and Plums, 10 feet.

Culture. As a general rule orchards should be kept in a cultivated state and receive occasional manurings, and their produce will always be in proportion to such attention. That manure which is decomposed and has lost its heat is to be preferred, and this should be most plentifully distributed in the immediate vicinity of each tree.

The pruning of trees in open culture is necessary to a certain extent, but far less so than often practiced. Nature, as a general rule, produces no greater development than she is capable of sustaining. All that is really called for, therefore, is the occasional thinning out of those branches which are so close as to prevent the sun from fully penetrating, or that might by friction injure each other.

SOIL, &c.

For the Apple rich strong loamy lands are the most appropriate, and as the roots are more horizontal than perpendicular, it does not require so deep a soil as the Pear. In fact the Apple will succeed in any soil except a quicksand or a cold clay if the ground is kept under cultivation and manured.—Those soils that possess a very considerable degree of humidity, but are not absolutely wet, suit the Apple very well, whereas they would be destructive to the Pear.

The Pear flourishes most on a deep rich soil that is comparatively light and porous, so as to allow a free filtration, and through which its perpendicular roots can easily pene-

trate. Cold, compact clay, and wet soils do not suit, and in such the growth is feeble and the trees short lived.

The Peach succeeds best in a rich light sandy loam, but will conform itself to almost any soil that is friable and kept in a cultivated state. The crops of fruit will be always in ratio to the attention given to culture and to the appropriate manurings, which should on no account be neglected.

The Nectarine, Apricot, and Almond, require a precisely similar soil and culture as prescribed for the Peach. The Nectarine is equally hardy, and the two latter nearly as much so.

The Plum adapts itself readily to almost any soil and situation, and will flourish any where except in a clay, marshy, or very sandy location. A rich friable soil is however to be preferred, and where not so, it should be made so by culture.

The Cherries which comprise the cultivated varieties claim a two fold parentage, and there is a difference in habit connected therewith. Those of the Heart and Bigarreau classes have perpendicular roots and require a deep soil, whereas the Duke and Morello classes have horizontal roots and require a soil of but moderate depth. With this distinction both divisions readily accommodate themselves to a variety of soils, and will succeed any where but in a clay, a very arid, or very wet location. That which is preferable, however, above all others is a light, rich, sandy loam.

The Quince flourishes most in a moist soil that is rich and friable, but readily accommodates itself to any upland soil that is not dry and sandy, but it is requisite to be constantly cultivated to insure a thrifty growth and large fruit.

The Grape requires a deep friable soil, and an exposure in accordance to the class to which it belongs, the foreign varieties alone requiring a particularly warm location. No Fruit will admit of such plentiful manurings as this, provided it be properly applied, the produce of fruit will be thereby immensely increased, and those who say the development produced is in wood without fruit are in a state of ignorance. Decomposed vegetable or animal manures, and above all the blood of cattle from the butcher's stall, plentifully and frequently mingled with the earth at a short distance from the main stalk of the vine, will cause a degree of vigor and productiveness that will astonish all who have not witnessed their effects.—In regard to pruning, the American varieties simply require such thinning out during the winter, as is necessary to prevent the branches injuring each other by contact, and the removal of such weak spurs as are immature and imperfect; but no fear should be indulged that the vine if in a good soil, is not capable of maturing its fruit on any extent of branches it may naturally produce, as among the most productive vines found in Carolina; there are many instances where a single vine covers an acre. Summer pruning is only called for in locations where the vines are confined in too narrow limits and then but very partially, as any considerable pruning will cause the fruit to turn black and fall off, and even cutting off the leaves will prevent the maturity of the fruit as they are the conductors of the essential nutriment from the atmosphere to the fruit and to the whole plant. The foreign varieties being natives of a much milder climate require considerable pruning, and but a moderate proportion of the vigorous shoots should be allowed to remain, it being necessary in this case to substitute skill and artificial culture in order to remedy the inappropriateness of climate.—The most delicate foreign varieties do not succeed in this latitude except under glass, but in that way they ripen well and are exceedingly productive.

The Gooseberry, Raspberry, and Currant, require a rich, friable soil, which should be well cultivated and manured. The Gooseberry will grow vigorously and produce very fine fruit if planted at the north side of a paling or open fence and about 2 feet distant from it, or if planted beneath the partial shelter of a peach or a plum orchard, as the full rays of the sun burn the fruit and arrest its growth. Raspberries also require the shelter afforded by a hedge or fence, from the too powerful rays of the sun.

Strawberries flourish most in a rich friable loam that retains moisture. A sandy soil may cause earlier maturity, but the crop will be deficient. They should be planted in April or September. The bed should be about four feet wide and the plants placed about 10 or 12 inches apart each way therein, and it is much the best course in our climate to let them run together, as they then afford shelter to each other from the too powerful rays of the sun. New beds should be formed and the old ones broken up every second year.

Note. For ample directions in regard to every department of Horticulture, reference can be made to the Treatises named at the commencement of this Catalogue, and to the forthcoming General Treatise on the subject which we shall soon publish.

A manual containing ample directions for the selection of soils and for the culture of the various Trees, &c., will be sent to every purchaser.
